4. **Changing Excel Interface for seamless looks** – Remove the clutter from the screen and create a seamless looking dashboard

BONUS VIDEO :
Search Engine in Excel

Complexity ●●●●●

Search Engine in Excel

Imagine that you a list of Employee Data (Name, Age, Department, Location). By creating a search capability you can pull up all the records matching your criteria

For Example
1. Search for all employees which have John in their name
2. Or search for all employees with location New York

Am I sure you can do this with Filter, but I am going to show you how to make it dynamic (so that you don't have to apply filter again and again) with Formulas and customize it to make it look classy!

Enroll Today!

4+ hrs of
Dashboard Creation + Videos

A set of 8 Part Videos Series explaining
1. Every minute detail about the dashboard
2. Kick ass tips on Visualizations

Bonus Tutorial on
How to Create a Search
Engine in Excel

A bonus video tutorial on creating a search engine to find multiple records using partial search

For eg.. Find all details of all employees with last name as "David"

For $60

Money Back Guarantee

I have put in a lot of effort, not only to create this Dashboard but also in creating an awesome video tutorial for you!

Just in case if you do not benefit from the program, please send me an email (goodly.wordpress@gmail.com) within 7 days from the date your purchase and I will refund your entire money back.

• No grudges, no questions asked, we are still friends ☺
• And I will still share all my free content and blog posts with you
